

deepwatch and Tenable Joint Solution Brief

TENABLE.SC AND TENABLE.IO

Joint Solution Overview

After rigorous testing and customer feedback deepwatch has chosen Tenable to enhance its Vulnerability Management service offering.

The deepwatch Vulnerability Management service provides the people and processes necessary for Tenable's technology to achieve maximum value for mutual customers.

Integrated into our Cloud SecOps Platform, Tenable enables deepwatch to enhance their Vulnerability Management service by giving deepwatch the ability to accurately identify, investigate, and prioritize vulnerabilities.

deepwatch Tenable Use Case Overview

deepwatch has built manual and automated workflows designed to reduce each customer's deep/dark web cyber threat exposure. Fueled by Digital Shadows CTI, deepwatch is able to proactively:

deepwatch builds VM programs around Tenable's technology because of its ability to scan the entire network and apply tags that provide a scalable, flexible solution that identifies and maps all assets across the environment. It identifies gaps or potential rogue assets a customer may not have known about.

deepwatch follows up with targeted vulnerability scans, which provide the data that feeds into deepwatch's prioritized remediation. Tenable's data is detailed and has a low false positive rate, making it actionable and defensible, which provides deepwatch the confidence they need in order to lower resistance with patching teams and turn stagnation into results.

With this foundation in place, deepwatch takes Tenable remediation data, combined with deepwatch's prioritized remediation recommendations, and delivers them to stakeholders of any organizational size. These metrics are not only meaningful, but measure and improve the customer's success within their vulnerability management program.

Once these results have started to be achieved deepwatch takes tenable remediation data, combined with deepwatch's prioritized remediation recommendations, and delivers them to senior management. The joint solution delivers insightful and valuable metrics to drive every improving customer success with their vulnerability management program.

JOINT SOLUTION BENEFITS

- ✔ **Leading threat detection, alerting and response fueled by rich context**
- ✔ **Unmatched customer data usability, enrichment, and availability**
- ✔ **Customer-specific deployments and security use case execution**

ABOUT TENABLE

Tenable®, Inc. is the Cyber Exposure company. Over 30,000 organizations around the globe rely on Tenable to understand and reduce cyber risk. As the creator of Nessus®, Tenable extended its expertise in vulnerabilities to deliver the world's first platform to see and secure any digital asset on any computing platform.

ABOUT DEEPWATCH

deepwatch secures enterprises via its unique, highly automated cloud based SOC platform backed by a world class team of experts that protect your network and digital assets 24/7/365. deepwatch extends your team and proactively improves your cybersecurity posture via our proprietary maturity model. deepwatch's managed security services are trusted by leading global organizations.
